

Connecting customers
to your workflow

Kodak
InSite
Prepress Portal System

Highlights

- Receive files directly into your **Kodak Prinergy Workflow System**
- Automate key steps in the prepress workflow
- Proof content and color online using the PDF master created by **Prinergy Software**
- Manage jobs with increased visibility and tracking
- Integrate with other portal tools for a complete solution, from creative to the pressroom

The **Kodak InSite** Prepress Portal System provides secure Web access into your workflow. From any Web-connected computer, customers, prepress operators, and service representatives can submit jobs, track

progress, collaborate on changes, and proof and approve work. When used with the **Prinergy Workflow System**, job submission via the prepress portal system triggers automated preflight and prepress file processing. It reduces job cycle times and proofing costs, and allows you to work with customers over a broader geographical area.

Increase automation and efficiency

The **InSite** Prepress Portal System is easy to use and carries your custom branding. It requires no special hardware or software at your customer's site, just a secure user ID and password as issued by your administrator.

The prepress portal system tracks all job submissions. Automated preflight and refine checks files for any problems before your prepress manager looks at the job. It alerts customers to problems, so corrected pages can be quickly uploaded. Its database tracks all activity, including change requests, approvals, or rejections. Automatic notification of these activities can be sent to designated individuals via e-mail. Being able to track activities—what, when, and by whom—is key to reducing errors, speeding up job cycle time, and recovering costs.

Review files with a versatile, built-in proofing client

The **Kodak Smart Review Proofing Client** allows all stakeholders to proof files online, individually or in group sessions using a Web chat. It uses pixel-streaming technology so even very large files can be accessed via the Internet. Smart Review works from the full-resolution production file, allowing you to zoom in on the image. Additional tools allow you to pan, measure sizes, check color with a densitometer, check color separations, and annotate any requested changes.

Smart Review uses the PDF digital master produced by the **Prinergy System**. Because the **InSite Prepress Portal System** and **Prinergy Software** use the same file, changes are almost never lost, and updates are immediately accepted back into the workflow.

Reliable, color-accurate soft proofing

Using **Kodak Matchprint** Virtual Technology with the **InSite** Prepress Portal System enables color-accurate monitor proofing. With this optional feature, colors will be consistent and accurate when viewed at different locations using calibrated monitors and controlled lighting. **Matchprint** Virtual Technology makes this possible with ICC profiles and precise tools for calibration and color verification. By reducing the dependency on hard copy contract proofs, both you and your customer share time and cost savings.

Create a complete portal solution

The **InSite** Prepress Portal System is one of several **Kodak** Portal Products designed to work together to enhance your service portfolio, attract new business, reduce turnaround times, and increase customer satisfaction.

The **InSite** Creative Workflow System provides proofing, approval, and collaboration tools to help manage the entire content creation cycle. The **InSite** Asset Library integrates with the creative workflow system. It effectively manages and stores digital assets used in projects, including photographs, illustrations, editorial content, and job specifications. The digital asset management system provides an enhanced OPI workflow when used in conjunction with the **Prinergy** System.

Kodak InSite Prepress Portal System Highlights

Features	Description
Workflow automation	<ul style="list-style-type: none">• Customers can create new jobs and upload files for automatic processing• Autorefine process plan (in the Prinerger System) allows quick feedback to customers, including error warnings
